

OrderX-Lite

*Live business data on your phone.
From Tally. For every business.*

OrderX-Lite connects seamlessly to your Tally data and puts it right in your pocket -- your stock, invoices, customers, outstanding bills, daily accounts, and deep analytics -- available anytime, anywhere.

Works for any business -- Retail, Wholesale, Distribution, Manufacturing, Services & more

What is OrderX-Lite?

Most businesses using Tally face a silent productivity gap. The moment your team steps away from the office desktop, they lose visibility. Salespeople do not know live stock levels. Owners cannot check outstanding dues. Managers have no idea how the day is going financially. Phone calls back to office waste hours every day.

OrderX-Lite bridges this gap -- without replacing Tally or changing how your team works. It reads your Tally data in real-time through a secure cloud sync and presents it in a clean smartphone interface. No duplicate entry. No separate software. Just your Tally data, always in your pocket.

THE PROBLEM

Your business data is trapped on a desktop.

Most Tally-based businesses still operate like this:

1

Blind Sales Team

Salespeople visit customers without knowing live stock levels, pending dues, or credit limits. Orders are taken on gut feel.

2

Delayed Invoices

Invoices are raised on the desktop hours after the sale, reaching customers the next day -- creating disputes and payment delays.

3

No Owner Visibility

Owners cannot see daily cash inflow/outflow, receivables, or sales performance without sitting at the office computer.

4

Capital Tied in Dead Stock

Thousands of rupees sit in inventory that has not sold in months. Nobody tracks it because the data takes too long to compile.

5

Dormant Customers Slip Away

Valuable old customers stop buying and nobody notices. There is no proactive system to flag or re-engage them.

HOW IT WORKS

Three steps. Zero disruption.

OrderX-Lite works alongside your existing Tally setup -- nothing changes for your accountants.

1

Connect Your Tally

A background connector syncs your Tally data -- items, customers, pricing, invoices, outstanding, and daybook -- securely to the cloud. Automatic, no manual effort needed.

2

Team Opens the App

Each team member opens OrderX-Lite on their smartphone. Every person sees only their authorized data. Live, searchable, and always up-to-date. No shared logins.

3

Act on Real-Time Data

Salespeople check stock instantly. Owners view profit trends. Managers review outstanding bills. Accountants verify daybook -- all from their phone, anywhere, anytime.

Eight powerful modules. One app.

Every module solves a real business problem. Together they give you a complete 360-degree view of your operations -- from any device.

DB

Dashboard & KPI Overview

Instant snapshot: Total Stock Value, Total Sales, Total Purchases, Net Receivables, Net Payables, and today's cash Inflow & Outflow. A colour-coded Net Balance card instantly shows whether the business is net receivable or payable. Tap any KPI to drill into full detail.

ST

Stock & Inventory

Complete product catalog synced from Tally -- Item Name, Quantity, Rate, Standard Cost, MRP. Smart multi-column search by name and part number. Per-item inventory valuation (Qty x Rate) calculated automatically. No more calling the warehouse before promising stock.

LD

Ledgers & Customer Directory

Full customer list with name, city, mobile number, credit limit, and opening balance. Paginated for performance across thousands of records. Instantly searchable. Ideal for field reps who need to verify customer details before every visit or call.

RP

Receivables & Payables

Two-tab outstanding module -- every pending invoice with customer name, invoice number, date, due date, overdue days, and closing balance. Overdue entries highlighted clearly. Powerful search across name, invoice number, amount, and date field.

SI

Sales Invoices

Every sales invoice from Tally with full line-item detail: product names, quantities, unit rates, GST rates, discounts, and net totals. Generate a professional PDF Tax Invoice and share it instantly via WhatsApp, Email, or any app -- one tap.

PI

Purchase Invoices

Minor of the Sales module -- for all purchase and supplier bills. Track inward supply with full line-item breakdown per purchase bill. Generate and share formatted Purchase Invoice PDFs directly from the app, without needing desktop access.

DY

Daybook (Daily Audit Trail)

All daily vouchers -- Receipts, Payments, Sales, Journals -- for any selected date. Filter by date with a calendar picker. Search by voucher number, ledger name, or voucher type. Debit entries show as Inflow in green; Credit entries show as Outflow in red.

AN

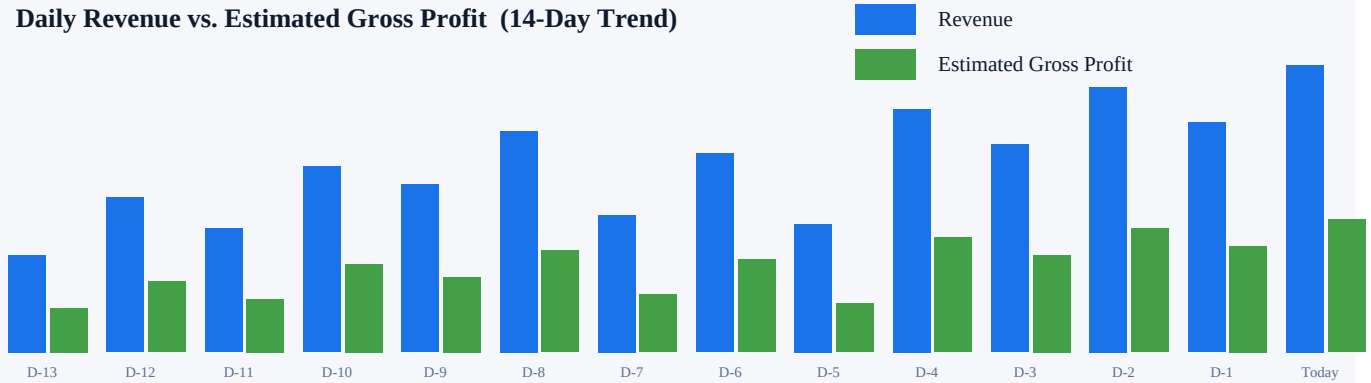

Analytics & Reports

Three-tab intelligence engine: (1) Overview -- 14-day Daily Revenue vs. Gross Profit bar chart with total KPIs. (2) Velocity -- Fast and Slow moving items by sales volume, configurable from 30 to 365 days. (3) Dormant -- Dead Stock items and Dormant Customers who have not purchased within a configurable lookback period.

Business intelligence, not just data.

Heavy SQL computations run directly on the cloud database via PostgreSQL RPCs -- so your phone always gets fast, accurate results, even with hundreds of thousands of records.

Daily Revenue vs. Estimated Gross Profit (14-Day Trend)

1. Daily Revenue & Gross Profit

Calculates per-day revenue (sum of invoice totals) and estimated gross profit using: $(\text{Unit Price} - \text{Standard Cost}) \times \text{Quantity}$. Falls back to Item Rate if Standard Cost is unavailable. Rendered as a 14-day dual-bar chart with total KPIs.

2. Fast-Moving Items

Identifies your best-selling products by total quantity sold over a configurable period (30, 90, 180, or 365 days). Uses a SQL RPC to aggregate sales, returning a ranked table -- essential for reorder planning and procurement decisions.

3. Slow-Moving Items

Surfaces products with low sales volumes in the selected period. Helps identify dead weight in your product catalog -- useful for targeted promotions, pricing adjustments, or discontinuing underperforming items.

4. Dead Stock (Unused Items)

Lists inventory items with current stock > 0 but zero sales in the chosen lookback period. Calculates total Dead Stock Value ($\text{Qty} \times \text{Rate}$), giving you the exact rupee amount of capital sitting idle in your warehouse.

5. Dormant Customers

Identifies customers who have not placed any order in the configured period (30 / 90 / 180 / 365 days). Returns a complete list for targeted re-engagement campaigns, special offers, or proactive follow-up calls from your sales team.

Why businesses choose OrderX-Lite

No Disruption to Tally

OrderX-Lite does not replace Tally. It reads from it. Your accounting team continues working exactly as before -- no workflow changes, no voucher impact, no GST compliance risk. The app simply exposes Tally data to mobile users.

Works for Any Business

Whether you run a pharmacy, hardware shop, FMCG distributor, electronics dealer, garment manufacturer, or a service firm -- if you use Tally, OrderX-Lite works for you. The modules are universal.

Multi-Company & Multi-User

Manage multiple Tally companies from one app. Switch with a single tap. Role-based data isolation ensures each user only sees what they are authorized to access -- your data stays secure and private.

Performance Optimized

Heavy analytics (profit trends, stock velocity, dead stock) run as optimized server-side queries -- not on the mobile device. The app remains fast and snappy even with hundreds of thousands of invoice records.

Secure & Private

All data stays in your own Supabase project. No third-party servers access your business data. Encryption in transit (HTTPS/TLS) and at rest. Row Level Security ensures complete tenancy isolation. Your data is yours, always.

Cross-Platform

One codebase -- available on Android, iOS, and Web. Whether your team uses iPhones, Android phones, or office browsers, everyone gets the same beautiful experience. The web version works on any browser for desktop access too.
